

3RD GRADE **ELA**

# Student Materials

## **Unit 4** *Understanding the Animal Kingdom*

# Daily Lesson Materials

Name: \_\_\_\_\_

Date: \_\_\_\_\_

Today's reading was *What is the Animal Kingdom? (The Science of Living Things)* pg. 4 – 7.

1. What **characteristics** do all animals share?

---

---

---

---

---

---

2. What are the key **characteristics** of each **kingdom**?

---

---

---

---

---

---

3. What is the key difference between **vertebrates** and **invertebrates**?

---

---

---

---

---

Name: \_\_\_\_\_

Date: \_\_\_\_\_

Today's reading was *What is the Animal Kingdom? (The Science of Living Things)* pg. 8 – 11.

1. What are the key **characteristics** of simple animals?

---

---

---

---

---

---

2. How do simple animals use their bodies for survival? Give an example for sponges, coelenterates, and echinoderms.

---

---

---

---

---

---

3. Most simple animals live in one place. Why? Would they be able to survive if they moved around?

---

---

---

---

---

---

4. Why are **organs** important for a worm's survival?

---

---

---

---

---

---

5. What **characteristics** are shared by all worms? What **characteristics** are varied? Give examples and explain why.

---

---

---

---

---

---

6. Earthworms and feather duster worms are both within the same species, yet they have different **characteristics**. Why? Would they both survive well on land? In the ocean? Defend.

---

---

---

---

---

---

Today's reading was *What is the Animal Kingdom? (The Science of Living Things)* pg. 12 – 15.

1. What **characteristics** are shared by all mollusks? What **characteristics** are varied?

---

---

---

---

---

---

2. How do gastropods, bivalve mollusks, and cephalopods use different **characteristics** for survival?

---

---

---

---

---

---

3. What **characteristics** are shared by all arthropods? What **characteristics** are varied?

---

---

---

---

---

---

4. Describe the difference between insects, arachnids, myriapods, and crustaceans.

---

---

---

---

Understanding the Animal Kingdom

## Narration Organizer

<b>Section #1</b> 0:00–0:26	We see octopuses moving across the bottom of the ocean, climbing on a tank, and briefly changing color.
<b>Section #2</b> 0:27–0:50	There is a small, colorful octopus moving on coral, followed by a couple of large octopuses. Then, we see a close up of suckers. Finally, an octopus squeezes itself through a very tight space.
<b>Section #3</b> 0:51–1:01	An octopus is moving over coral and three hearts show up in the top corner. Then, a blue blood cell is shown. As another octopus crawls on the bottom of the ocean, three more hearts are shown.
<b>Section #4</b> 1:01–1:08	Next, a crab is on the beach, then a shrimp is shown on a rock or coral, and a hermit crab is in his shell.
<b>Section #5</b> 1:09–1:44	A shark is swimming. Then different octopuses are shown changing colors to match the environment, either rocks or coral. One hidden octopus suddenly shows itself and sprays black ink before swimming away. This section ends with a close up of suckers.
<b>Section #6</b> 1:45–2:40	Different octopuses shown on corals, swimming and moving around the ocean floor.

**Choose a section to narrate.** Be sure to use two different pronouns that match the noun they replace. Underline the noun and pronoun, and draw an arrow from the pronoun to the noun it is replacing. Include at least one simple sentence, one compound sentence, and one complex sentence.

The African elephant and the polar bear are both mammals, but they have many differences in how they look, live, and survive. Both animals are **warm-blooded vertebrates** with fur and give birth to live young. However, the elephant has thick, wrinkled skin and a long trunk, while the polar bear has a dense coat of white fur and a powerful build for swimming. These mammals also live in opposite environments. Elephants roam the hot savannas and forests of Africa, while polar bears live on the icy shores of the Arctic. When it comes to survival, elephants use their trunks to gather food and water and rely on the protection of the herd. Polar bears hunt seals on the ice and use their white fur to blend into their surroundings. Even though they belong to the same group, they have very different **adaptations** for their environments.

## Single Paragraph Outline

Topic Sentence (What is being compared) : The African elephant and the polar bear are both mammals, but they have many differences in how they look, live, and survive.

- Detail 1 (What is the same): warm-blooded vertebrates with fur or hair; give birth to live young
- Detail 2 (What is different): physical features → elephant has a trunk and large ears; polar bear has thick white fur and a layer of blubber, habitat → elephant lives in savannas and forests; polar bear lives on Arctic sea ice, survival adaptation → elephant uses its trunk to gather food and water; polar bear hunts seals and blends into the snow

Concluding Sentence (What you learned or why it matters): Even though elephants and polar bears are both mammals, they survive in very different ways.

Today's reading was *What is a Life Cycle? (The Science of Living Things)* – pg. 14-15, 16-17.

1. What happens at each stage of an **amphibian's life cycle**?

---

---

---

---

---

---

2. Why is water important to an **amphibian's life cycle**? What would happen if water were missing at one stage?

---

---

---

---

---

---

3. What happens at each stage of a reptile's **life cycle**?

---

---

---

---

---

---

4. What happens when a reptile **molts**? Why do reptiles continue to **molt** throughout their entire lifetime?

---

---

---

---

---

---

**Writing Prompt**

hatchlings    molt

Both **amphibian** and reptile **life cycles** include birth, reproduction, growth, and death; however, their **life cycles** are not exactly the same.

Explain how **amphibian** and reptile **life cycles** are different. Use the [Amphibian vs. Reptile Life Cycle Diagrams \(G3, U4, L11\)](#), labels, and a caption to support your answer.

## Single Paragraph Outline

Topic Sentence: A butterfly goes through four important stages in its life cycle.

- Detail 1: egg stage → lays tiny eggs on a leaf
- Detail 2: caterpillar stage → egg hatches = caterpillar
- Detail 3: chrysalis stage → forms a chrysalis, transforms
- Detail 4: adult stage → a butterfly comes out

Concluding Sentence: The butterfly's life cycle shows how much it changes from beginning to  
end.

# Life Cycle: Mammal

Name: \_\_\_\_\_

Date: \_\_\_\_\_

Today's reading was *What is a Life Cycle? (The Science of Living Things)* – pg. 18-19, 20-21, 22-25.

1. What happens at each stage of a fish's **life cycle**?

---

---

---

---

---

---

2. How have different fish adapted to ensure reproduction and growth?

---

---

---

---

---

---

3. What is similar about all bird **life cycles**? In what ways do they differ?

---

---

---

---

---

---

4. How is the **life cycle** of a mammal different from the **life cycle** of other animals?

---

---

---

---

---

---

## Life Cycle Diagram 2

Name: \_\_\_\_\_ Date: \_\_\_\_\_

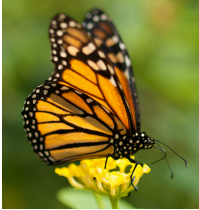

## Life Cycle Diagram 3

The **life cycle** begins as an egg or a seed. The organism grows safely inside the egg or seed. It stays there until it is ready to hatch or sprout.

The next stage is birth. The organism hatches, sprouts, or is born. After this stage, it begins to grow bigger and stronger.

Finally, the adult makes **offspring**. These new eggs or seeds begin the **life cycle** again. The cycle continues over and over.

At this stage, it is fully grown. Its body changes are complete, and it is able to reproduce.

Today's reading was *How do Animals Adapt? (The Science of Living Things)* pg. 4 – 9.

1. What is **adaptation**? Why do animals need to **adapt**? Do all **adaptations** happen at the same rate? Why or why not?

---

---

---

---

---

---

2. What is **evolution**?

---

---

---

---

---

---

3. Why do some scientists believe that some early reptiles evolved into birds?

---

---

---

---

---

---

4. How have bats evolved? Why?

---

---

---

---

---

---

5. Why are climate **adaptations** crucial for survival? How are climate **adaptations** influenced by the environment?

---

---

---

---

---

---

6. How does the author use text features to help readers better understand animal **adaptations**?  
Why?

---

---

---

---

<b>Topic Sentence</b>		
<b>Reason #1</b>	<b>Reason #2</b>	<b>Reason #3</b>
<b>Concluding Sentence</b>		

Name: \_\_\_\_\_ Date: \_\_\_\_\_

## Single Paragraph Reasons Organizer

**Topic Sentence**

The forest is the perfect environment for the Burrowing Fangtail because the forest gives it what it needs to survive.

**Reason #1**

Camouflage fur helps it hide

**Reason #2**

Strong claws for burrowing

**Reason #3**

Sharp teeth catch prey

**Concluding Sentence**

Because of these, the Burrowing Fangtail can survive in the forest environment.

# Revision Strategy Menu

## Add

**Ask yourself:** "What can I add to make my writing clearer or more complete?"

**When to use:**

- Writing needs more explanation
- Missing information or a linking word (like *because* or *also*)

**Example:** It also has strong claws for digging **burrows**, *which helps it escape predators quickly.*

## Delete

**Ask yourself:** "Is there anything extra or off-topic?"

**When to use:**

- Repetition of the same words, phrases, or ideas
- Writing goes off topic

**Example:** The forest is the perfect habitat for the Burrowing Fangtail. ~~Because of these adaptations, the Burrowing Fangtail can live successfully in the forest.~~

## Change

**Ask yourself:** "Can I say this in a better way?"

**When to use:**

- A word or phrase is not clear
- Make the message stronger by using different words

**Example:** The forest provides lots of small animals and insects.  
→ The forest provides an abundance of small animals and insects.

## Rearrange

**Ask yourself:** "Would my writing make more sense in a different order?"

**When to use:**

- Important details are out of order
- Words, phrases, sentences, or ideas are confusing

**Example:** Its fur helps it blend in... It also has strong claws for digging **burrows** ... The forest provides plenty of food. → The forest provides plenty of food... Its fur helps it blend in... It also has strong claws for digging **burrows** .

# Vocabulary

Word	Part of Speech	Definition
adapt	v.	to change in order to make survival easier
adaptation	n.	a change in the body of an animal or in the way it behaves to make survival easier
amphibian	n.	an animal that can live in water and on land
burrow	v.	to make a hole or tunnel in the ground to live or hide in
camouflage	n.	body markings that allow animals to blend in with their habitats
carnivore	n.	an animal that eats other animals
characteristics	n.	the specific traits of a person, thing, or group
cold-blooded	adj.	a type of animal whose body temperature changes with the temperature of their environment
defense	n.	an act taken to keep someone or something safe from attack
evolution	n.	a theory that animals and plants have naturally changed over time
exo-	prefix	

Word	Part of Speech	Definition
exoskeleton	n.	a hard covering outside of an invertebrate animal that provides support and protection
hatchlings	n.	young animals that come from an egg
in-	prefix	
invertebrate	n.	an animal that does not have a backbone
kingdom	n.	one of the three categories used to categorize natural objects
life cycle	n.	the stages an animal goes through from birth until death
metamorphosis	n.	the process in which an animal completely transforms
migrate	v.	to move from one place to another to live
mimicry	n.	the imitation by an organism of its environment or of other organisms as a means of survival
molt	v.	to lose hair or feathers that are replaced by new hair or feathers

Word	Part of Speech	Definition
nocturnal	adj.	to be active during the night and sleep during the day
offspring	n.	the baby of an animal or plant
omnivore	n.	an animal that eats both plants and animals
organ	n.	a part of the body that has a particular job
prey	n.	an animal hunted by another animal for food
re-	prefix	
skeleton	n.	the set of bones, rods, shells, or other stiff substances that support an animal's body
support	v.	to hold up
-tion	suffix	
vertebrate	n.	an animal that has a backbone
warm-blooded	adj.	an animal that maintains a constant body temperature; often warmer than the temperature of their surroundings

# Informational Writing Rubric

## 3rd Grade English Language Arts

<b>Rubric Scoring Key</b>	<b>Fully meets (4)</b> All criteria present in the writing	<b>Mostly meets (3)</b> Most criteria present, with some misunderstandings	<b>Partially meets (2)</b> Criteria attempted, but major misunderstandings	<b>Does not meet yet (1)</b> Criteria are not attempted or not enough evidence to rate
---------------------------	---	---	---	---

<b>Structure</b>	<b>Rubric Score</b>	<b>Notes</b>
<b>Sections</b> Writes a complete paragraph that includes a topic sentence, supporting sentences, and a concluding sentence; Uses a paragraph structure to organize information depending on the type of information included and the purpose of the writing; <u>May</u> use one of the following structures: sequence/chronology or cause-and-effect	4 3 2 1	
<b>Introduction</b> Starts by introducing a topic and why it is important; Introduction uses a lead that captures the reader's interest, such as posing a question or presenting fascinating facts or details; Consistently writes in the third-person	4 3 2 1	
<b>Conclusion</b> Includes a concluding statement that provides a sense of closure; Restates the topic and re-emphasizes the main ideas	4 3 2 1	

<b>Development</b>	<b>Rubric Score</b>	<b>Notes</b>
<b>Details</b> Includes three or more facts and details to develop and support the topic; Details tell more about each fact	4 3 2 1	
<b>Text Features</b> As called for by the task, uses two to three text features to reinforce main ideas, including a title, illustrations, headings, labels, captions, bold words, diagrams	4 3 2 1	
<b>Linking Words and Phrases</b> Effectively and consistently uses linking words or phrases to connect ideas	4 3 2 1	

<b>Language</b>	<b>Rubric Score</b>	<b>Notes</b>
<b>Grammar</b> Includes complete simple, compound, and complex sentences; uses coordinating and subordinating conjunctions to construct compound and complex sentences  Uses correct subject-verb and pronoun-antecedent agreement; Uses nouns correctly, including regular and irregular plural nouns and abstract nouns; Uses verbs correctly, including simple verb tenses and regular and irregular verbs; Uses adjectives and adverbs correctly, including comparative and superlative adverbs	4 3 2 1	
<b>Conventions</b> Uses correct capitalization conventions, including words in titles; Uses correct punctuation conventions, including commas in addresses, commas and quotation marks in dialogue, and apostrophes in possessives	4 3 2 1	

# Opinion Writing Rubric

## 3rd Grade English Language Arts

<b>Rubric Scoring Key</b>	<b>Fully meets (4)</b> All criteria present in the writing	<b>Mostly meets (3)</b> Most criteria present, with some misunderstandings	<b>Partially meets (2)</b> Criteria attempted, but major misunderstandings	<b>Does not meet yet (1)</b> Criteria are not attempted or not enough evidence to rate
---------------------------	---	---	---	---

<b>Structure</b>	<b>Rubric Score</b>	<b>Notes</b>
<b>Organizational Structure</b> Writes a complete paragraph that states their opinion, includes a topic sentence, lists the relevant reasons that support their opinion, and includes a concluding sentence; Uses third-person to state an opinion consistently	4 3 2 1	
<b>Introduction</b> Clearly states a topic and opinion; Introduction <u>may</u> use a lead that captures the reader's interest, such as posing a question or starting with a fact	4 3 2 1	
<b>Conclusion</b> Includes a concluding sentence that restates the opinion; Concluding sentence(s) may ask a question or make a suggestion	4 3 2 1	

<b>Development</b>	<b>Rubric Score</b>	<b>Notes</b>
<b>Reasons</b> Includes three or more relevant reasons to support opinion; reasons may be from personal experience, facts, or details; Effectively chooses compelling reasons and orders most compelling reasons first	4 3 2 1	
<b>Linking Words and Phrases</b> Effectively and consistently uses linking words or phrases to connect opinion and reasons	4 3 2 1

# Single Point Informational Writing Rubric

## 3rd Grade English Language Arts

<b>Structure</b>	<b>Areas for Growth</b> What could I do to make my writing even stronger? How can I improve?	<b>Criteria</b> Expectations for my writing assignment:	<b>Strengths</b> What am I doing well already? What am I proud of?
<b>Sections</b>		I have organized my writing in a complete paragraph that includes a topic sentence, supporting sentences, and a concluding sentence.	
		I use a compare and contrast paragraph structure to organize information, depending on the type of information included and the purpose of the writing.	
<b>Introduction</b>		I have introduced my topic and why it is important.	
		My introduction uses a lead that captures the reader's interest, such as: <ul style="list-style-type: none"> <li>● Posing a question</li> <li>● Presenting fascinating facts or details</li> </ul>	
		I use the third-person throughout my writing.	

	<b>Areas for Growth</b> What could I do to make my writing even stronger? How can I improve?	<b>Criteria</b> Expectations for my writing assignment:	<b>Strengths</b> What am I doing well already? What am I proud of?
<b>Conclusion</b>		I have included a concluding statement that provides a sense of closure, restates the topic, and re-emphasizes the main idea.	

	<b>Areas for Growth</b> What could I do to make my writing even stronger? How can I improve?	<b>Criteria</b> Expectations for my writing assignment:	<b>Strengths</b> What am I doing well already? What am I proud of?
<b>Development</b>			
<b>Details</b>		I have included specific facts and details to develop and support the topic.	

# Single Point Opinion Writing Rubric

## 3rd Grade English Language Arts

	<b>Areas for Growth</b> What could I do to make my writing even stronger? How can I improve?	<b>Criteria</b> Expectations for my writing assignment:	<b>Strengths</b> What am I doing well already? What am I proud of?
<b>Structure</b>		I include a topic sentence that clearly states my opinion, three or more reasons that support the opinion, and a concluding statement.	
		I use the third-person throughout my story.	
<b>Topic Sentence</b>		I clearly state a topic and opinion and include a lead that captures the reader's interest.	
<b>Concluding Sentence</b>		I include a concluding sentence that restates my opinion.	
<b>Reasons</b>		I include three or more relevant reasons from personal experience, facts, or details.	
		I put my most convincing reason first.	

<p><b>Linking Words</b></p>		<p>I use linking words or phrases (such as <i>because, also, for example, in addition</i>) to connect the opinion and reasons clearly.</p>	
<p><b>Diagram</b></p>		<p>My diagram includes clear, accurate labels for important body parts.</p>	
		<p>My diagram shows how the animal's body parts or <b>adaptations</b> help it survive.</p>	
		<p>My diagram is neat, organized, and easy for the reader to understand.</p>

Understanding The Animal Kingdom

**Directions:** Read the following passage. As you read, think about how octopuses **adapt** to their environments.

### Excerpt from *The Amazing Octopus*

By Bobbie Kalman, adapted by Fishtank Learning

#### What is an Octopus?

- 1 Octopuses are mollusks. Mollusks are soft-bodied invertebrates, or animals that do not have backbones. In fact, octopuses do not have any bones at all!
- 2 Most mollusks have hard shells around their bodies for protection, but octopuses do not. Octopuses are so well adapted, or suited to, surviving in the ocean that they have little need for this kind of armor.

#### Masters of Disguise

##### 3 *Rainbow Skin*

Octopuses are able to change the color of their skin to match their surroundings. An octopus's skin has tiny cells, called chromatophores, which are filled with colored chemicals. These cells receive messages from the octopus's brain. Each chromatophore expands or contracts to change the color and pattern of the octopus's skin. Bright skin colors are created by fully expanded chromatophores. Pale skin colors are the result of contracted cells. Using tiny muscles, an octopus can also alter the texture, or feel, of the surface of its skin.

Less than one second after sensing danger in its surroundings, this octopus changed the color of its skin from white (above) to red (below).

##### 4 *Blending In*

An octopus changes both the color and the texture of its skin to camouflage itself, or blend in with its surroundings. When it is hiding in a coral reef, the octopus makes its skin multi-colored and bumpy to resemble a piece of coral. When the animal is hiding on the sandy ocean floor, its skin turns brown and grainy to look just like sand.

Two-spot octopuses have circles on their skin that look like large eyes. These false eyes may convince predators that the octopus is bigger than it really is.

## 5 *Skin Signals*

When an octopus is calm, its skin stays its normal color. When its skin changes to a deep red or dark brown, the animal is probably threatened or anxious. This color change is a signal to others to stay away!

## Great Escapes

- 6 Many ocean animals eat octopuses. Octopuses depend on a variety of self-defense skills to hide and escape from these and other predators. If it is discovered, an octopus may try to make its body look bigger to scare a predator. To do so, the octopus spreads out its arms and puffs up its skin. It can also frighten a predator by raising the skin above its eyes to make itself look as if it has horns.

## Baby Octopuses

- 7 A female octopus may lay as few as 50 eggs or as many as 400,000 eggs, depending on her species. Octopus mothers search for safe dens in which to hide their eggs until they hatch. Most octopuses stay near their eggs. Mothers may even stop hunting and eating so that they do not have to leave their dens.

## 8 *Short Life Spans*

Most eggs laid in warm water hatch after a month. Eggs in cold water take longer to develop. Once the eggs hatch, the mother usually dies. The baby octopuses look like tiny adults. Most are eaten by predators, but those that live grow to full size quickly. Some species become adults, mate, and die in less than six months. Other species live up to five years.

Kalman, Bobbie. "The Amazing Octopus (The Living Oceans)." Crabtree Publishing Company, 2003. Used with permission.

1. This question has two parts. First, answer Part A. Then, answer Part B.

**Part A:** What does the word **armor** mean as used in paragraph 2 of the text?

- a. defense
- b. sword
- c. skin
- d. species

**Part B:** Which detail from the passage helps the reader understand the meaning of **armor**?

- a. "Mollusks are soft-bodied invertebrates"
- b. "... so well adapted, or suited to, surviving..."
- c. "Most mollusks have hard shells around their bodies for protection..."
- d. "... do not have any bones at all!"

2. Why does the author describe **chromatophores** in paragraph 3?
  - a. To explain how octopuses move through the water
  - b. To explain how octopuses change color to match their surroundings
  - c. To show why octopuses have hard shells
  - d. To describe how octopuses lay eggs
  
3. How do the pictures in the section "Masters of Disguise" support the idea that octopuses are masters of disguise?
  - a. By showing how every octopus has a different colored skin
  - b. By showing how octopus respond to danger
  - c. By showing how an octopus' skin expands or contracts
  - d. By showing the texture of an octopus' skin
  
4. How have octopuses adapted to escape predators? Select all that apply.
  - a. They change their skin color and texture to blend in with their surroundings.
  - b. They spread out their arms and puff up their bodies to look bigger.
  - c. They grow hard shells to use as armor.
  - d. They raise the skin above their eyes to look like they have horns.
  - e. They stay in large groups to protect one another.
  - f. They stop moving completely at all times.
  
5. Why do mother octopuses stay near their eggs?
  - a. To teach the babies how to swim
  - b. To protect the eggs until they hatch
  - c. To help the eggs grow faster
  - d. To change the color of the eggs
  
6. How does paragraph 8 connect to paragraph 7?
  - a. It explains how octopuses catch prey.
  - b. It explains how octopuses change their skin color.
  - c. It shows how octopuses escape predators.
  - d. It describes what happens after the eggs hatch.
  
7. What new information do the illustrations add to the text?
  - a. They show different examples of the octopus's **adaptations**.
  - b. They represent the **life cycle** of an octopus.
  - c. They explain how chromatophores work.
  - d. They tell about different kinds of octopuses.

Understanding the Animal Kingdom

**Part One: Vocabulary**

1. What does it mean if an animal **adapts**?
  - a. It moves to a new location.
  - b. It changes in order to make survival easier.
  - c. It hides to blend in with its surroundings.
  - d. It makes a hole or tunnel to live in.
  
2. Which of the following is a **characteristic** that all animals share?
  - a. They have backbones
  - b. They eat plants
  - c. They use their senses to find out about the world around them
  - d. They move from place to place
  
3. What is an **exoskeleton**?
  - a. A skeleton inside of an invertebrate
  - b. A hard covering outside of an invertebrate
  - c. A soft covering outside of an invertebrate
  - d. A skin that molts
  
4. What is an **amphibian**?
  - a. An animal that can live in water and on land
  - b. An animal that eats other animals
  - c. An animal that does not have a backbone
  - d. An animal that is hunted by another animal for food
  
5. Pick two words from the list below. Write a sentence using each word.

**defense****migrate****omnivore****support**
