

Trees in the rainforest grow really tall.

Plants and animals in the rainforest need a lot of rain to survive.

energy

Plants use water, air, and sunlight to make food through photosynthesis.

macaws

Carnivores like pumas get energy by eating other animals.

This monkey is an omnivore. It eats both plants and animals.

Herbivores like this butterfly eat only plants.

forest floor

beetles

water

Tree roots suck up water and nutrients from the soil.

ferns

Flowers need butterflies to spread their pollen.
