

## TEN AND THEN GAME BOARD

### K-2nd Grade Mathematics

#### How to play:

1. Shuffle the numeral cards (6–9) and stack face down.
2. Player A: Choose a number (5–9) from the bottom of the game board and build it on the first ten frame. Flip over a numeral card and add that many counters (filling in the first ten frame first) to figure out the total. Write an equation on your recording sheet to represent the counters.
3. Player B: Repeat the process from step 2.
4. Players A & B: Continue to take turns building models and recording equations.
