## THE TEN TRAIL GAME BOARD B (SUBTRACTION)

### K-2nd Grade Mathematics

#### How to Play:

1. Put both counters on **Start** to begin. Partners take turns rolling a die and moving that many spaces on the board.
2. Each partner solves the problem that they land on using counters or linking cubes and ten frames or mental math to help.
3. Take turns moving along the ten trail until the first player reaches the **Finish** square.
