

## WAR: ADDITION PROCEDURES

### K-2nd Grade Mathematics

#### **How to play:**

1. Shuffle the cards and deal them equally to Players A and B.
2. Players A and B: Put cards in a pile, numeral side down. At the same time, flip over the top 2 cards and find the total when added together.  
*If the totals are the same, each player flips over 2 more cards and finds the total.*
3. The player with the greater total takes all 4 cards from that round and puts them in a “win” pile.
4. Keep playing until all cards are used.
5. Count your win piles. The player with more cards wins.
